F means Field-Grown

RC means Rooted-Cuttings
T means Transplanted

S means Seedling
SWC means Softwood Cutting

(Please Order in Multiples of 25)

ALL PRICES ARE GIVEN IN CENTS PER EACH

All our cuttings are rooted in soil. As soon as they root they usually begin to make some new growth, often a great deal, and always begin to develop a hard secondary root system. After a few months many are about equal to light bed grown liners although we continue to call them rooted cuttings.

So that you can judge what we are offering we give the month in which the cuttings were rooted. That is, "RC June 55" would mean cuttings rooted during June, 1955 which have been growing in the soil in which they were rooted ever since. The amount of growth and the development of the root system will be in proportion to the time since they were rooted. If no date is given you should expect to receive rooted cuttings in about the same stage you would from common greenhouse operations.

All plants go through our normally severe winters outside so you can depend on receiving thoroughly hardened and dormant liners. However, spring does come early here. Some varieties will show activity by March 10 and nearly all begin some growth by the first of April so please be sure to order early.

Our descriptions conform to standard practice for liners but please do remember that most of the plants on this list are for lining out purposes and will not always necessarily meet AAN grades for finished stock. For finished grades of stock refer to our big folder and our white sheet enclosed.

FREE PACKING ON LINERS—Packed in polyethylene sheet or polyethylene lined paper and sphagnum moss.
